

# A NEW BOOK ON THE CYCADACEAE

## CYCADS OF VIETNAM

**Roy Osborne  
Ken D. Hill  
Hiệp T. Nguyen  
Loc Phan Ke**

Only fairly recently has Vietnam become recognised as a country of enormous biological diversity. This is true not only in its fauna but also in its flora. New discoveries have revealed an abundance of cycads—fascinating plants now known to occupy a key position in plant evolution.

Vietnam's cycads, many of which have been named only in the last 10–15 years, occupy a variety of specialised habitats. Some are obligate beach-dwellers, some live only in the northern mountains, some occur on small offshore islands, while some grow in tiny crevices on near-vertical limestone cliffs. Many are found in areas of spectacular natural beauty.

Vietnam's cycads are as diverse  
their habitats. Some  
in height

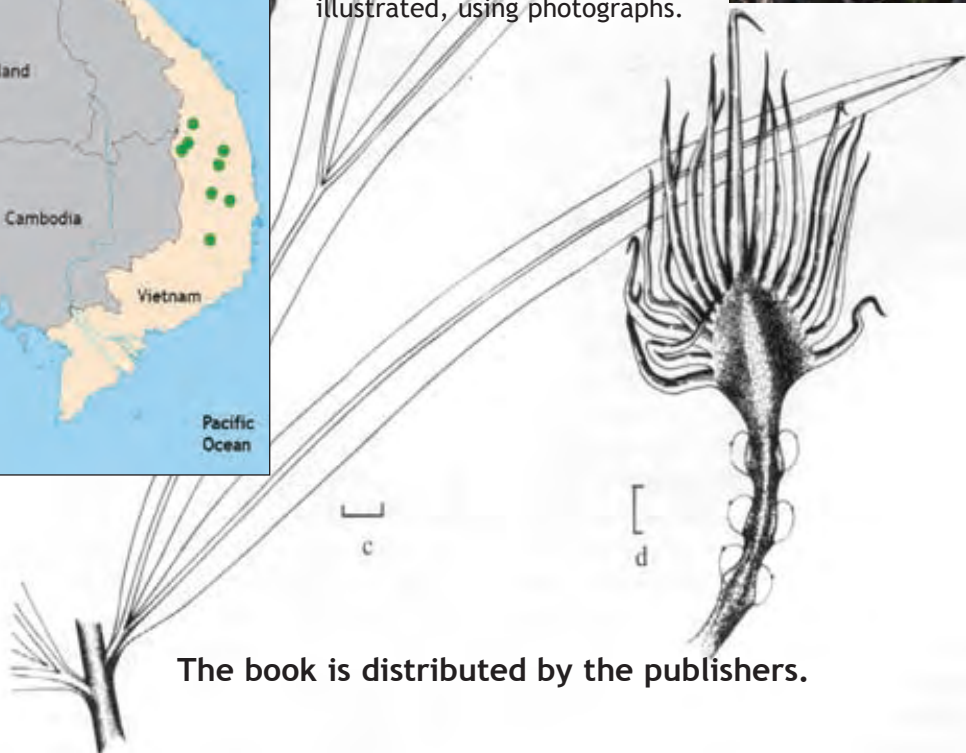

in their morphology as they are in  
have a tree-like form reaching 12 m  
while others are bonsai-like  
dwarfs. Some have strange  
swollen 'elephant's foot'  
trunks. Some have pinnate  
leaves reaching 4.5 m in length  
while others have multiple leaf  
bifurcations.

In 'Cycads of Vietnam', each  
of the 27 species is described  
in detail with line drawings,  
maps and numerous  
photographs illustrating points  
of interest. This book is  
commended to cycad  
hobbyists, nurserymen,  
researchers, students,  
conservation officials  
and those with a general  
interest in plant evolution  
and matters botanical.

The book is richly illustrated with tables, drawings and around 200 photographs, showing habitats, male and female cones of the species and morphological details of the plants. The text cover various aspects of cycad, from History, Geography, Climate, Flora and fauna, Ecology and vegetation types, Distribution and relationships, Classification of *Cycas*, Vegetative morphology, Reproductive features, Pollination and seed dispersal, Hybridism, Toxicity, Ethnobotany, Conservation and Cultivation.

A Key to *Cycas* species in Vietnam is given before the species are treated individually. Each description has a distribution map and the species is very well illustrated, using photographs.

The book is distributed by the publishers.

#### In Southern Africa

Contact Wynand van Eeden at [wynand@ananzi.co.za](mailto:wynand@ananzi.co.za) or Telephone +27 76 756 9299.

Books cost ZAR255.00 plus postage and packaging.

#### The Rest of the World

Buy online at: [http://www.satooz.com.au/category57\\_1.htm](http://www.satooz.com.au/category57_1.htm) or contact Roy Osborne at [cycad@dodo.com.au](mailto:cycad@dodo.com.au)

Books cost AU\$42.50 plus postage and packaging.
